

DHYEY RAJESH SHAH

Dallas, TX · (945) 241-6194 · dhyeysahr@gmail.com · linkedin.com/in/dhyeysah28801 · github.com/dhyeysah28801 · dhyeysah28801.github.io/portfolio

Software engineer with 3+ years building backend platforms, AI/LLM systems, and cloud infrastructure across fintech, e-commerce, and supply-chain — 60% faster APIs, 80% fewer deployment failures, 99.9% availability. M.S. Computer Science (3.93 GPA).

EDUCATION

M.S. Computer Science, University of Texas at Dallas — GPA 3.93/4.0

Aug 2024 – May 2026

B.E. Computer Engineering, Gujarat Technological University — GPA 9.5/10

Jun 2019 – Jun 2023

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C/C++, Dart

Backend & Cloud: Spring Boot, Node.js, Express, REST APIs, Microservices, AWS (Lambda, S3, CloudFront, Glue), Azure, GCP, Kubernetes, Docker, Terraform, Jenkins, GitHub Actions, Serverless Framework

Data & Messaging: PostgreSQL, MySQL, MongoDB, DynamoDB, Apache Kafka, Apache Solr, Elasticsearch

AI/ML: LLM integration (Anthropic, OpenAI, Gemini), Model Context Protocol (MCP), prompt orchestration, PyTorch, Hugging Face, YOLOv8, collaborative filtering (ALS)

Frontend & Observability: React, Vue.js, AngularJS, Flutter, Grafana, Datadog, Kibana, Scalyr

PROFESSIONAL EXPERIENCE

Software Engineer Intern — Copart

May 2025 – Present · Dallas, TX

Fortune-500 online vehicle auction platform — Member Platform team

- **Slashed server response times 60%** for millions of vehicle buyers by re-architecting API call patterns and applying **Java** design patterns across high-traffic **Spring Boot** services on **Kubernetes**
- **Cut member onboarding time 70%** by driving the registration-revamp project — automating manual verification checks, **ID verification**, state-specific document recommendations, and **auto-activation** of member accounts
- **Contributed core features to a company-wide AI integration framework** that lets teams ship or edit **LLM prompts** through configuration or UI with **zero redeploy**s — accelerating AI adoption across the organization
- **Architected a high-throughput event pipeline** streaming member activity into a **Grafana**-connected datastore, turning raw platform events into real-time product analytics
- **Cut incident time-to-detection** by standing up in-house **Apache Solr**, **Kafka**, and message-queue infrastructure and wiring **Scalyr**, **Datadog**, and **Grafana** into the monitoring stack

Platform Engineer — Distinction Dev

Mar 2024 – Aug 2024

- **Cut resource consumption 40%** by engineering a real-time event fan-out platform with **AWS Glue** schema validation for a UK credit-card provider, hardening every downstream data consumer
- **Drove deployment failures down 80%** by architecting end-to-end test pipelines (**Vitest**, **Jest**, **Mocha**) into **GitHub Actions** + **Docker** CI/CD — making risky releases routine
- **Unified three fintech platforms** — Salesforce, Mambu, GoCardless — behind one Adapter-pattern integration layer (**TypeScript**, **Inversify**), erasing duplicated client code across services
- **Replaced manual Lambda release rituals** with an Infrastructure-as-Code framework (**AWS SDK**, **GitHub Actions**), standardizing deployments across a legacy serverless estate

Software Developer — Distinction Dev

May 2023 – Mar 2024

- **Accelerated order processing 70%** by building serverless **Node.js** microservices on **AWS** (**Serverless Framework**, **CloudFormation**) powering a UK retailer's nationwide supply-chain automation across thousands of live orders
- **Reduced SQL execution time 60%** by tuning **Sequelize ORM** queries and **MySQL** indexing under production order-tracking load
- **Achieved ~40% faster page loads and 99.9% availability** by pairing **Vue.js** + **Auth0** frontends with an **S3** / **Route 53** / **CloudFront** edge-delivery pipeline
- **Compressed release cycles by two weeks** by owning client demos, system-architecture design, and cross-team coordination end to end

Flutter Developer Intern — UrbanWeb Solutions

Dec 2022 – May 2023

- **Shipped a cross-platform inventory app** (**Flutter**, **PHP**) putting real-time supply-chain data in field crews' hands for a steel manufacturer; led an intern team and ran the client demos that won next-phase approval

PROJECTS

Sentinel — AI-Powered Log Watchdog

github.com/dhyeysah28801/sentinel

- Full-stack watchdog pulling infrastructure logs through a **custom MCP server** with pluggable adapters (Elasticsearch, DataSet/Scalyr, file); an **LLM classifies anomalies into structured JSON** and severity-gated alerts route to email/Slack — TypeScript monorepo, React dashboard, PostgreSQL/Drizzle

AI Orchestrator — Config-Driven LLM Framework

github.com/dhyeysah28801

- Spring Boot (Java 21) framework where one endpoint executes any configured prompt against **Anthropic**, **OpenAI**, or **Gemini** via a provider-agnostic engine factory with Resilience4j retries and **JSON-Schema-validated output**; new prompts and provider swaps ship as config changes with **zero redeploy**s

More projects — an explainable recommendation engine on 3.4M Instacart orders, a voice-to-SQL app, and a YOLOv8 parking-occupancy detector — at dhyeysah28801.github.io/portfolio
